EXAMINER

MANNING, JOHN

ART UNIT

PAPER NUMBER

2614

DATE MAILED: 07/01/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/802,638	KITSUKAWA, TADAMASA	
	Examiner	Art Unit	
	John Manning	2614	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☐ Claim(s) 1-14 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-14 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 12 and 14 are rejected under 35 U.S.C. 102(e) as being anticipated by Matthews, III et al. (US Pat No 5,914,746).

In regard to claim 1, Matthews discloses a subscriber interface for maintaining a virtual channel table having entries for a plurality of virtual channel numbers.

The recitation of a "A method for correlating plural Web site addresses to plural virtual channels, comprising the acts of:" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See *In re Hirao*, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and *Kropa v. Robie*, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951). The claimed step of "providing at least one correlation table stored in an interactive television" is met by Figure 2, Item 32. "STB 10 includes means for associating each virtual channel number with a program

Art Unit: 2614

from headend 12. In the described embodiment, such means comprises a virtual channel table 32 having entries for a plurality of virtual channel numbers. An entry for a particular virtual channel number includes a designation of an available program from the headend which is to be associated with the virtual channel number" (Col 4, Lines 43-50).

In regard to claim 14, Matthews discloses that at least one virtual channel number is established by a consumer. "In the exemplary embodiment of the invention described herein, the viewer is involved in setting up and maintaining a channel line-up in the virtual channel table--the viewer can change the mapping of virtual channel numbers to available programs" (Col 5, Lines 44-49).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-2, 4-5, 7 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matthews, III et al. (US Pat No 5,914,746).

In regard to claim 1, Matthews discloses a subscriber interface for maintaining a virtual channel table having entries for a plurality of virtual channel numbers.

The claimed step of "establishing an access restriction table, the access restriction table including plural virtual channels" is met by Figure 2, Item 32. "STB 10

Art Unit: 2614

includes means for associating each virtual channel number with a program from headend 12. In the described embodiment, such means comprises a virtual channel table 32 having entries for a plurality of virtual channel numbers. An entry for a particular virtual channel number includes a designation of an available program from the headend which is to be associated with the virtual channel number" (Col 4, Lines 43-50). The claimed step of "making the access restriction table accessible to the television" is met by Figure 3. "FIG. 3 is a diagrammatic illustration of virtual channel table 32. In the example given, table 32 contains 500 entries, for virtual channel numbers 1 through 500. The channels are arranged in order. A viewer can increment or decrement the virtual channel number to move or "surf" between channels. When incrementing above the last virtual channel number, the first entry becomes current. When decrementing below the first virtual channel number, the last entry becomes current" (Col 4, Lines 51-59). The claimed step of "selectively enabling a consumer to access a Web site address using the interactive television by selecting a virtual channel" is met by Figure 3. "Virtual channels 4, 121, 122, and 500 are associated with other illustrated examples of executable applications 46 which, when selected, are to be executed at STB 10" (Col 5, Lines 6-9). Matthews discloses virtual channel correlating to online services. The reference, however, is silent with respect to the online services being a web site (with a corresponding address). Official notice is taken that is notoriously well known in the art for an online services to use web sites so as to efficiently reach a large number of customers. Consequently, it would have been

Art Unit: 2614

obvious to one of ordinary skill in the art to implement Matthews with web sites for the stated advantage.

In regard to claim 2, Matthews discloses generating a table correlating online services with respective virtual channel numbers. "STB 10 includes means for associating each virtual channel number with a program from headend 12. In the described embodiment, such means comprises a virtual channel table 32 having entries for a plurality of virtual channel numbers. An entry for a particular virtual channel number includes a designation of an available program from the headend which is to be associated with the virtual channel number" (Col 4, Lines 43-50). "FIG. 3 is a diagrammatic illustration of virtual channel table 32. In the example given, table 32 contains 500 entries, for virtual channel numbers 1 through 500. The channels are arranged in order. A viewer can increment or decrement the virtual channel number to move or "surf" between channels. When incrementing above the last virtual channel number, the first entry becomes current. When decrementing below the first virtual channel number, the last entry becomes current" (Col 4, Lines 51-59). The reference discloses the step of selectively enabling a consumer to access a online service using the interactive television by selecting a virtual channel (see Figure 3). "Virtual channels 4, 121, 122, and 500 are associated with other illustrated examples of executable applications 46 which, when selected, are to be executed at STB 10" (Col 5, Lines 6-9). Further, "FIG. 3 is a diagrammatic illustration of virtual channel table 32. In the example given, table 32 contains 500 entries, for virtual channel numbers 1 through 500. The channels are arranged in order. A viewer can increment or decrement the virtual

Art Unit: 2614

channel number to move or "surf" between channels. When incrementing above the last virtual channel number, the first entry becomes current. When decrementing below the first virtual channel number, the last entry becomes current" (Col 4, Lines 51-59).

Clearly, Matthews discloses virtual channel correlating to online services. The reference, however, is silent with respect to the online services being a web site (with a corresponding address). Official notice is taken that is notoriously well known in the art for an online services to use web sites so as to efficiently reach a large number of customers. Consequently, it would have been obvious to one of ordinary skill in the art to implement Matthews with web sites for the stated advantage.

In regard to claim 4, Matthews discloses that the table is stored at the television (see Col 4, Lines 1-8 and 22-24).

In regard to claim 5, Matthews fails to disclose the table being stored at the head end. Official notice is taken that it is notoriously well known in the art to maintain client information, such as a table, at the head end so as to lessen the processing power required at the set top box. Consequently, it would have been obvious to one of ordinary skill in the art to implement Matthews with the table being stored at the head end for the stated advantage.

In regard to claim 7, Matthews discloses at least one server having online services being associated with a respective virtual channel number (see Figures 2 and 3). "STB 10 includes means for associating each virtual channel number with a program from headend 12. In the described embodiment, such means comprises a virtual channel table 32 having entries for a plurality of virtual channel numbers. An entry for a

Art Unit: 2614

particular virtual channel number includes a designation of an available program from the headend which is to be associated with the virtual channel number" (Col 4, Lines 43-50). Further, "STB 10 is used in conjunction with an audio/video display device or television receiver 14 and a hand-held remote control unit or infra-red keypad 16. One environment for the invention is in a hybrid fiber-optic/coax cable distribution system employing digital switching technologies such as asynchronous transfer mode (ATM) for bi-directional communications with individual subscribers. The headend in such a system is capable of supplying a number of different services or programs, ranging from traditional broadcast television, to movies-on-demand, to online shopping, banking, and information services" (Col 2-3, Lines 61-8). The reference discloses at least on interactive television (see Figure 1), the interactive television system server including a table for selectively allowing access to online service using the interactive television. "FIG. 3 is a diagrammatic illustration of virtual channel table 32. In the example given, table 32 contains 500 entries, for virtual channel numbers 1 through 500. The channels are arranged in order. A viewer can increment or decrement the virtual channel number to move or "surf" between channels. When incrementing above the last virtual channel number, the first entry becomes current. When decrementing below the first virtual channel number, the last entry becomes current" (Col 4, Lines 51-59). Further, "Virtual channels 4, 121, 122, and 500 are associated with other illustrated examples of executable applications 46 which, when selected, are to be executed at STB 10" (Col 5, Lines 6-9). Matthews discloses virtual channel correlating to online services. The reference, however, is silent with respect to the online services being a web site (with a

Art Unit: 2614

corresponding address). Official notice is taken that is notoriously well know in the art for an online services to use web sites so as to efficiently reach a large number of customers. Consequently, it would have been obvious to one of ordinary skill in the art to implement Matthews with web sites for the stated advantage.

In regard to claim 13, Matthews discloses a virtual channel correlating to an online service. The reference, however, is silent with respect to the online services being a web site (with a corresponding address). Official notice is taken that is notoriously well know in the art for an online services to use web sites so as to efficiently reach a large number of customers. Consequently, it would have been obvious to one of ordinary skill in the art to implement Matthews with web sites for the stated advantage.

5. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Matthews, III et al. in view of Dunn et al. (US Pat No 6,584,613).

In regard to claim 3, the Matthews reference fails to disclose that the virtual channel number are established by telephone number. Dunn teaches establishing a channel number using a telephone number (Dunn: Col 2, Lines 25-27) so as to so as to facilitate the generation of a channel number. Consequently, it would have been obvious to one of ordinary skill in the art to implement Matthews with establishing a channel number using a telephone number for the stated advantage.

6. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Matthews, III et al in view of Stinebruner (US Pat No 6,133,910).

In regard to claim 6, the Matthews reference fails to explicitly disclose "setting a restriction flag on each entry in the table; the flag indicating whether content associated with the address of a selected virtual channel can be displayed". Stinebruner teaches "setting a restriction flag on each entry in the table; the flag indicating whether content associated with the address of a selected virtual channel can be displayed" so as to allow parents to control the content that their child accesses. Each virtual channel has associated with it at least a source indicator and a channel indicator which represent the source to view and the particular channel to view on that source. Additional information, e.g., a channel identifier (which could represent a textual description of the channel), a parental lock flag; among others, may also be associated with a virtual channel" (Col 5, Lines 49-55). Consequently, it would have been obvious to one of ordinary skill in the art to implement Matthews with "setting a restriction flag on each entry in the table; the flag indicating whether content associated with the address of a selected virtual channel can be displayed" for the stated advantage.

7. Claims 8-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matthews in view of Watson (US Pat No 5,289,271).

In regard to claim 8, the claimed limitation of "logic means for enabling a consumer to access content stored at a Web server using an interactive television" is met by that discussed above for claim 7. Matthews fails to explicitly disclose recording a portion of the content accessed and a time of access record and billing the customer based on the on the record. Watson teaches recording a portion of the content accessed and a time of access record and billing the customer based on the on the

Art Unit: 2614

record so as to enable subscribers to be charged a fee based upon their actual usage rather than a flat rate. "The invention is an apparatus for (1) recording the specific channels to which the device is tuned; and (2) the periods of time for which it is tuned to each respective channel; and (3) for periodically reporting the information, in time units allocated to each channel, to the originator of the cable signal; (4) all without participation by the individual cable user; and (5) without the necessity of intrusion into the individual turning circuit" (Col 3, Lines 54-61). Consequently, it would have been obvious to one of ordinary skill in the art to implement Matthews with recording a portion of the content accessed and a time of access record and billing the customer based on the on the record for the stated advantage.

Claims 9 and 10 are met by that discussed above for claim 8.

In regard to claim 11, combined teaching discloses that the access record way be user for billing or the polling of subscribers. Watson is silent with respect to determining whether the information is for private or public viewing. However, it is submitted that it would have been obvious to one of ordinary skill in the art to determine whether the information is for private or public viewing so as to ensure the privacy of the subscriber.

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Manning whose telephone number is 571-272-7352. The examiner can normally be reached on M-F: 9:00 - 5:30.

Art Unit: 2614

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John W. Miller can be reached on 571-272-7353. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
